

MUSIC MP3 DOWNLOADS

Instructions for purchasing Dynamix Music album downloads:

In order to download a Dynamix Music album, you will need to complete your purchase first. Your order can include album downloads, music CDs and any other product(s) you like. Simply add the item(s) to your shopping cart and complete the checkout process. When you are completing your order on our website, we will obtain a credit card approval at the time you click on "submit order" during final checkout. Assuming your credit card is approved, your computer will display a confirmation page instantly which will include the link(s) for your album download(s). If you would like to download your music file(s) at that time, simply click on the link(s). If you would like to wait until a later time, you will also receive an email order confirmation which will include a link for your download file(s). You will have 72 hours from the time you complete your order to download your music. Anytime during the 72 hours you will just need to click on the link and then follow the prompts to log in to your account on our website and download the file(s) to your computer.

The file(s) you will download will be in a ZIP format which will need to be opened on your computer once the download completes. The ZIP file will include a file folder for each album you purchased. Inside the file folder will be each individual track associated with the album(s) you have purchased. The tracks will be in sequential order and will play continuously one after the other. If the album you purchased is a double disk program, then the file folder will include 2 folders inside of it that contain the individual tracks for each program. The music files you download from our site will all be MP3 files.

When you are ready to download the file from our website, you will click on the download link in your account. When you click on the link, a window will appear asking you if you want to run or save the file. Please choose "save". Once you choose "save", a window will appear showing various locations on your personal computer. You should select a destination that you can locate easily (examples are "desktop", "temp", "C-Drive" etc.). When the download is complete you will then be able to locate the file in the destination you specified. To open the downloaded ZIP file, double click on the file and it will open another window. You should click one time on the file folder in this new window with your mouse and while holding down the the left button of your mouse, drag the folder to a location on your computer that is easy for you to locate (desktop is a common choice). This will create a folder on your computer that you can now use. If you like you can delete the ZIP file that you downloaded as it is no longer required.

At this time, to ensure our albums play without any gaps between the songs, you will need to add the songs to I-Tunes. You can then put the album(s) onto your IPOD or create a CD from I-Tunes. The easiest way to add our album downloads to I-Tunes is to add the folder of the album you downloaded to I-Tunes by choosing "Add Folder To Library" from the File Menu in I-Tunes and then highlighting the folder you want to add. Then you will need to create a playlist and then choose "burn playlist" to create your CD. This will ensure that the songs stay together, in order and play back without interruption.

If you are hearing a break between songs during playback in I-Tunes or on a CD you burned from I-Tunes please be sure to verify the following settings:

1) Breaks between songs on burned CD:

In I-Tunes, Choose the "Edit Tab" and then "Preferences". Then in preferences, click on "Advanced" and then the tab called "Burning", under audio disc format, change the "Gap Between Songs" to "None"

2) Breaks between songs playing in I-Tunes:

In I-Tunes, Choose the "Edit Tab" and then "Preferences". Then in preferences choose "Playback" and uncheck the box for "Crossfade Playback".
